

Candidate Name

Software Engineering Focus

name@example.com | +00 000 000 000 | [GitHub](#) | [LinkedIn](#) | City, Country

TECHNICAL SUMMARY

Two concise lines covering engineering focus, production scope, architecture or domain strengths, and the most relevant verified outcome.

TECHNICAL SKILLS

Languages and frameworks: Confirmed technologies ordered by job relevance.

Data and infrastructure: Databases, cloud, deployment, observability, and security experience.

Engineering practice: Testing, architecture, delivery, review, incident response, and collaboration methods.

ENGINEERING EXPERIENCE

Official Engineering Title — Organisation

Month Year – Present

Location

- Designed or implemented a verified system, naming the scope, technical approach, and result.
- Solved a difficult confirmed constraint involving scale, reliability, security, data integrity, or delivery.
- Clarify personal ownership and collaboration boundaries for architecture, implementation, or operations.

Previous Engineering Title — Previous Organisation

Month Year – Month Year

Location

- Add distinct evidence relevant to the vacancy, using confirmed technologies and outcomes only.

SELECTED PROJECTS

Project or Product

[Human-readable link](#)

State what the candidate personally built, the technical depth, its status, and verified adoption or outcome.

EDUCATION

Qualification and Subject, Institution

Month Year – Month Year

Include a relevant dissertation, publication, module, or award when it materially strengthens the application.
